

Certinal CFMS

UNIFYING CONSENT, THE LAST BROKEN STEP IN DIGITAL CARE

Where **Consent** Still Breaks

HOSPITALS ALREADY HAVE:

EMR + HIS

eSign Tools

Billing & portal
digitization

BUT CONSENT STILL HAPPENS VIA:

Paper forms
+ scanning

Email PDFs
+ printing

No audit, no
version control

Delays in OPD, IPD,
and discharge

The Compliance Disconnect

Digitized ≠ Defensible

01

No clause version tracking

02

No audit chain across updates

03

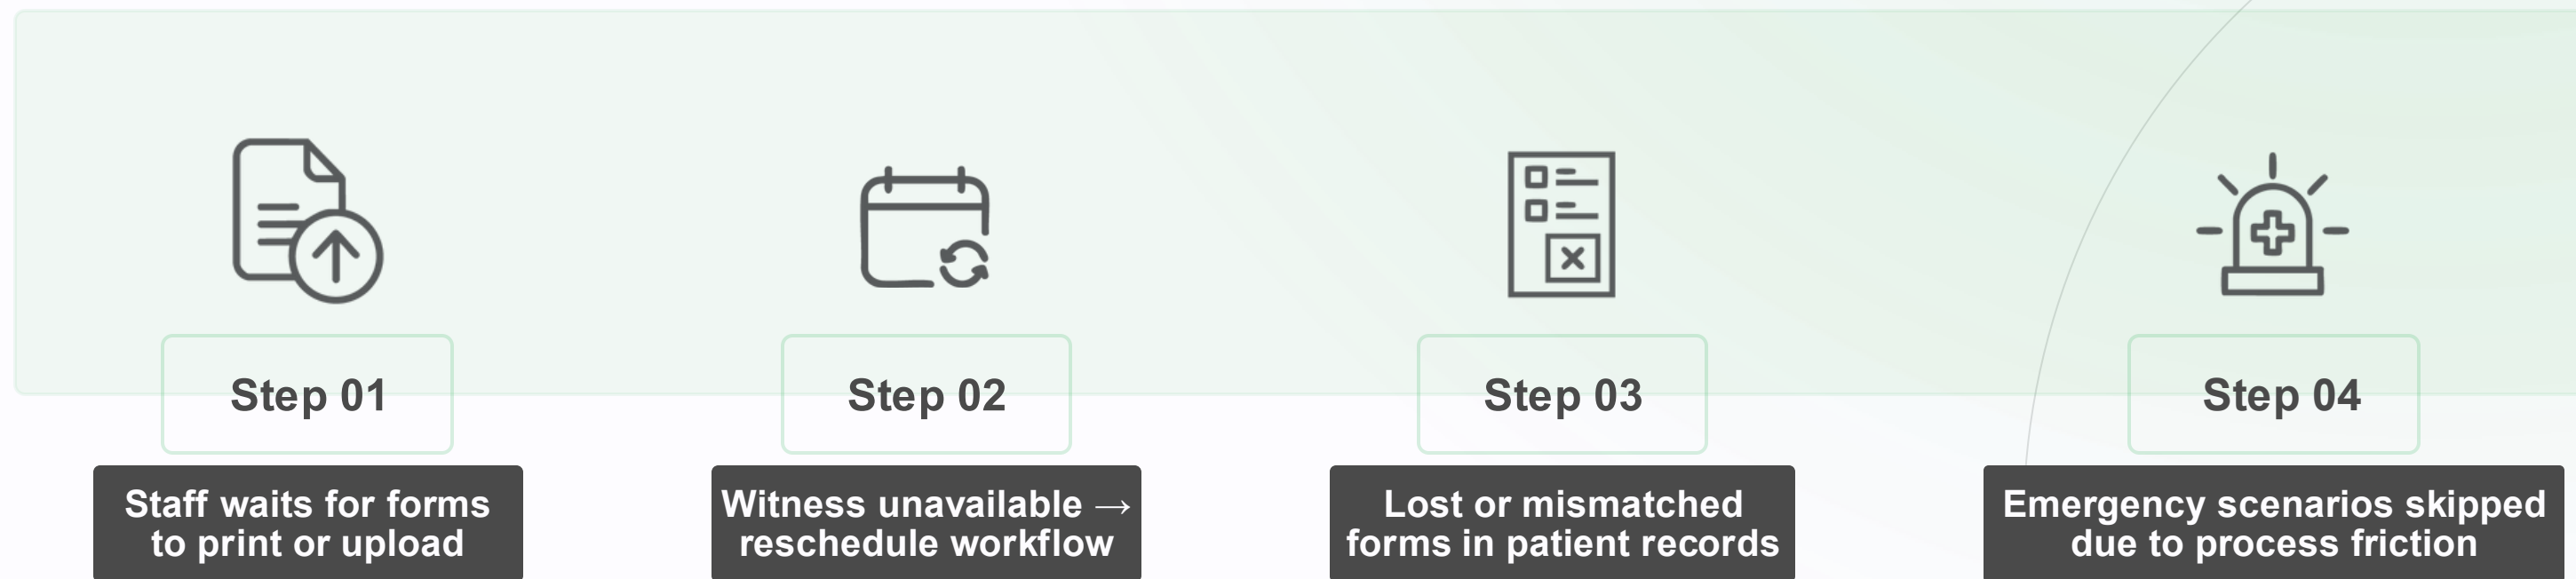

Language variants handled manually

04

Regulatory risks (HIPAA, GDPR, DPDPA)

Manual Gaps That Delay Care

Introducing a New Category Consent Form Management System (CFMS)

01

Built for recurring regulatory change

02

Optimized for tablets, mobile, remote, in-person

03

Plug-and-play with your EMR/HIS

04

One interface, all workflows, no chaos

Why Digitized Forms Aren't Enough

Static PDFs
don't version

eSign tools aren't
clause-aware

HIS forms lack
flexibility

Language parity
is still manual

Built for **Compliance** From Day One

Clause-level versioning

Tamper-proof consent records

Language-linked templates

Role-based access + audit logs
